

HIVERADAR

WSSK v3

Our **Universal AP Mounting Bracket** is sturdier than previous, with a crisp clean finish. The bracket swivels with a stiffer rigidity for heavier access points allowing for both ceiling & wall deployment scenarios. The Quick Lock negates the need to overtighten the bracket to the pole. Simply line up the bracket to the front of the kit & lock in place. The Mini Ball Mount on the top of the mount is for attaching cameras (GoPro/360cam). Record a time-lapse of your wifi survey from ceiling height, snap photos of importance & engage with customers by showcasing your work.

Standard Height - The standard max mounting AP height goes up from 9 feet to 12 feet. Yeah we still managed to fit everything into the case.

Connectivity Information - Laser etched connection indicators.

Kit Stabilizer - Increased height needs stability! Simple physics.

Quick Locks - Machined knurled quick locks for better grip and a tool free experience

Feet - Rubberized feet better grip so obviously no moon walking. Sorry MJ!

Lid Interior - Yes everything fits!

Power Pack Chassis - New chassis design for holding the battery and PoE injector is integral to kit stability.

Quick Locks - Yes another one but it's different...this one is spring loaded. Swapping batteries in a snap!

Light Guide - Quick visual indicator to ensure your PoE injector has power.

Pluck Foam - Thanks to all the feedback we have replaced custom foam with pluck foam. Personalize it with your own gear and tools.
